

AMRISHKHAN SHEIK ABDULLAH

Technical Lead • MS Architect • Enterprise Integrations Specialist • AI Developer Tooling

Dubai, UAE • +971 52 588 6136 • amrishkhan05@gmail.com

LinkedIn: linkedin.com/in/amrishkhan • Portfolio: amrishkhan.dev

PROFESSIONAL SUMMARY

Technical Lead and Full-Stack Engineer with around 10 years of experience designing, building, and delivering scalable enterprise applications, distributed backend systems, customer-facing digital platforms, and developer tooling across airline, real estate, SaaS, and enterprise environments.

Strong expertise in Node.js, NestJS, TypeScript, JavaScript, Java, React, Angular, Next.js, microservices, event-driven architecture, REST/GraphQL APIs, WebSockets, databases, and cloud-based application development. Experienced in designing production-grade backend services, complex API integrations, payment workflows, real-time systems, and high-availability customer journeys.

Experienced across the complete engineering lifecycle, including solution design, system architecture, hands-on development, API design, technical leadership, code reviews, testing, deployment, production monitoring, troubleshooting, and release support.

Actively building and researching AI-assisted developer platforms, LLM workflows, Retrieval-Augmented Generation (RAG), Model Context Protocol (MCP), local-first software architecture, and intelligent developer tooling. Creator of Aruvix, a privacy-focused developer productivity ecosystem designed around browser-native processing and local-first workflows.

Combines hands-on engineering with technical leadership, system design, production ownership, and continuous exploration of emerging technologies.

PROFESSIONAL HIGHLIGHTS

- Around 10 years of software engineering experience across frontend, backend, distributed systems, developer platforms, and enterprise applications.
- Strong hands-on expertise in TypeScript, JavaScript, Node.js, NestJS, React, Angular, Next.js, Java, SQL, and modern API engineering.
- Experienced in designing microservices, event-driven systems, scalable backend architectures, real-time applications, and distributed services.
- Designed and delivered customer-facing systems and integrations for airline, real estate, payment, SaaS, and enterprise platforms.
- Experience integrating payment providers including Magnati and Network International, including webhook-driven transaction and reconciliation workflows.
- Strong understanding of REST APIs, GraphQL, WebSockets, asynchronous processing, API orchestration, authentication, integration patterns, and backend performance.
- Hands-on production experience covering Linux deployments, Nginx, CI/CD, application monitoring, troubleshooting, cron jobs, releases, and production support.
- Experienced in technical leadership, architecture discussions, engineering standards, code reviews, mentoring, and cross-functional delivery.
- Building independent developer products involving local-first architecture, desktop applications, browser-native processing, Git-native workflows, Tauri, and Rust-backed execution.
- Exploring practical applications of LLMs, RAG, MCP, AI-assisted engineering workflows, and intelligent developer tooling.

CORE COMPETENCIES

Technical Leadership • Full-Stack Engineering • Backend Architecture • Solution Design • Microservices • Event-Driven Architecture • Distributed Systems • Scalable Systems • API Engineering • Enterprise Integrations • Real-Time Systems • Payment Integrations • Local-First Architecture • AI Developer Tooling • Cloud Engineering • CI/CD • Production Engineering • System Optimization • Technical Mentorship

PROFESSIONAL EXPERIENCE

TECHCARROT FZ LLC — Dubai, UAE

Aug 2022 – Present

Technology Lead Analyst – Backend

Leading and contributing to enterprise application development across airline and digital platform engagements, with responsibility spanning backend architecture, full-stack engineering, integrations, production systems, and technical delivery.

Key Contributions

- Architect and build scalable backend systems, microservices, secure APIs, and customer-facing digital journeys using Node.js, NestJS, TypeScript, and modern integration patterns.
- Design backend services with emphasis on scalability, maintainability, resilience, API performance, and production reliability.
- Contribute to high-volume airline passenger journeys, including check-in, seat selection, ancillary services, boarding-pass-related workflows, and supporting API integrations.
- Build and integrate passenger-facing functionality using Angular, Node.js, NestJS, REST APIs, and asynchronous backend services.
- Design integration and orchestration layers between frontend applications, backend-for-frontend services, internal business services, and downstream enterprise APIs.
- Implement robust API error handling, validation, retry strategies, and failure-management patterns for distributed service interactions.
- Integrated Magnati and Network International payment platforms, including webhook-driven transaction handling and reconciliation workflows.
- Work with real-time and asynchronous communication patterns where required across customer-facing systems.
- Manage and support Linux-based deployments, Nginx configurations, cron jobs, production monitoring, backend optimization, troubleshooting, and release activities.
- Drive engineering quality through code reviews, technical discussions, reusable implementation patterns, automated testing, and production-readiness checks.
- Delivered critical airline modules with 95%+ automated test coverage.
- Collaborate with frontend, backend, QA, architecture, product, and external integration teams to diagnose complex cross-system issues and deliver production-ready solutions.

MSYS TECHNOLOGIES — Bangalore, India

May 2021 – Aug 2022

Lead Engineer / Full-Stack Developer

- Owned the end-to-end software delivery lifecycle, from requirement analysis and technical discussions through implementation, testing, deployment, and production handover.
- Led architecture and implementation activities across client-facing applications while maintaining hands-on responsibility for critical engineering components.
- Built scalable backend applications and APIs using Node.js, TypeScript, databases, and modern backend engineering patterns.
- Developed modern frontend applications using Next.js and React, focusing on reusable architecture, maintainability, and performance.
- Worked with Java-based backend services and enterprise application components, contributing across polyglot technology environments.
- Established coding conventions and reusable development patterns that improved consistency and reduced regressions.
- Conducted code reviews, supported developers with technical challenges, and contributed to architecture and implementation decisions.
- Worked closely with stakeholders and engineering teams to translate business requirements into reliable technical solutions.
- Supported release planning and production delivery while maintaining accountability for application quality and stability.

Senior Software Engineer

- Designed and developed GraphQL middleware and cloud-integrated application services using AWS AppSync, AWS Amplify, and AWS Lambda.
- Reduced frontend orchestration complexity by introducing centralized GraphQL-based service and data-access patterns.
- Developed custom product functionality including multi-recording audio playlist workflows, reporting modules, and reusable application components.
- Built and maintained full-stack functionality across multiple client-facing applications.
- Supported simultaneous projects with staggered development and deployment schedules.
- Collaborated across frontend, backend, QA, and product teams to deliver releases within client timelines.
- Investigated production issues, optimized existing functionality, and supported continuous application improvements.

COGNIZANT TECHNOLOGY SOLUTIONS — Chennai, India

Aug 2016 – Jul 2019

Programmer Analyst

- Worked as a MEAN-stack developer building enterprise web applications using Angular, Node.js, JavaScript, MongoDB, HTML, and CSS.
- Developed reusable Angular components, directives, services, and shared modules used across application workflows.
- Implemented keyboard-focused UX improvements and reusable interaction patterns for productivity-oriented enterprise applications.
- Built backend functionality and integrations using Node.js and MongoDB.
- Created reusable cross-project modules that accelerated implementation across multiple teams.
- Participated in requirement analysis, development, testing, debugging, and production support activities.
- Established a strong foundation in enterprise software engineering, full-stack development, API integration, and collaborative delivery.

SELECTED PRODUCT & OPEN-SOURCE WORK**ARUVIX** • *Independent Product Builder & Full-Stack Architect* • aruvix.com*A privacy-first developer productivity ecosystem focused on local-first workflows, browser-native processing, API tooling, and modern developer experiences.*

- Conceived and architected the product from initial idea through system design, development, deployment, performance optimization, and product evolution.
- Designed a modern TypeScript-based architecture using React, Vite, Node.js, and modular frontend engineering patterns.
- Built developer utilities for working with structured data, APIs, request transformations, comparisons, and development workflows.
- Designed the platform around local-first and privacy-first principles, keeping supported processing on the user's device instead of unnecessarily transferring developer data to external servers.
- Explored scalable approaches for handling large payloads, browser performance, application state, and developer-focused interaction patterns.
- Designed architecture for desktop developer tooling using Tauri with Rust-backed local execution.
- Research and prototype AI-assisted workflows, LLM integration patterns, RAG, MCP, and intelligent developer tooling.
- Own the complete product lifecycle including architecture, engineering, UX/UI, branding, deployment, performance, SEO, documentation, and product strategy.

SQL-SELECT-QUERY-GENERATOR | *Open-Source NPM Package*

- Created and published an open-source JavaScript package for generating dynamic SQL SELECT queries from JSON configuration.
- Designed to simplify configurable backend query generation and reporting-oriented use cases.
- Published and maintained through the NPM ecosystem.

TECHNICAL SKILLS

Category	Skills
Programming Languages	TypeScript • JavaScript • Java • HTML5 • CSS3
Frontend Engineering	React • Next.js • Angular • Vue.js • Vite • Material UI • Bootstrap
Backend & API Engineering	Node.js • NestJS • Express.js • GraphQL • REST APIs • WebSockets • Socket.IO
AI & Developer Tooling	LLM Workflows • Retrieval-Augmented Generation (RAG) • Model Context Protocol (MCP) • AI-Assisted Developer Tooling • Local-First AI Workflows
Databases	PostgreSQL • MongoDB • MySQL • Microsoft SQL Server (MSSQL)
Cloud & DevOps	AWS • Firebase • Azure DevOps • Nginx • GitHub • GitLab • CI/CD • Linux
Architecture & System Design	Microservices Architecture • Event-Driven Architecture • Distributed Systems • Scalable Systems • API Design • Integration Architecture • Local-First Architecture • Real-Time Systems • Backend-for-Frontend (BFF)
Testing & Quality Engineering	Jest • Playwright • Automated Testing • Integration Testing • Code Reviews
Desktop & Emerging Platforms	Tauri • Rust-Backed Application Architecture • Electron Concepts • Modern JavaScript Runtime Concepts

EDUCATION

ST JOSEPH'S COLLEGE OF ENGINEERING — Chennai, India | Bachelor of Engineering – EEE, 2016

CERTIFICATIONS

HackerRank Certifications: JavaScript, SQL, Problem Solving

LEADERSHIP & PROFESSIONAL STRENGTHS

Technical Leadership • Architecture & Design • Problem Solving • Engineering Mentorship • Code Reviews • Cross-Functional Collaboration • Requirement Analysis • Production Ownership • Release Management • Stakeholder Communication • Continuous Learning • Critical Thinking

TECHNICAL INTERESTS

Open-Source Engineering • System Design • Distributed Systems • Developer Platforms • Local-First Software • AI-Assisted Development • Technical Writing • Developer Advocacy • Emerging AI Technologies
