

Amrishkhan Sheik Abdullah

Technology Lead | Microservices & Backend Architect

Contact: +971-525886136 | **E-Mail:** amrishkhan05@gmail.com
LinkedIn: linkedin.com/amrishkhan | **Portfolio:** www.amrishkhan.dev

Technology Lead with over 10 years of experience in back-end engineering, microservices architecture, enterprise integrations, cloud-native solutions, and full-stack development. Leveraging expertise in Node.js, NestJS, scalable systems, APIs, and payment integrations to deliver high-performance digital platforms and drive technical excellence.

Profile Summary

- Technology Leadership:** Accomplished Technology Lead with rich experience in back-end engineering, enterprise applications, microservices architecture, and full-stack development across airline, SaaS, real estate, and enterprise domains.
- Backend Development:** Expertise in building scalable back-end systems using Node.js, NestJS, Express.js, TypeScript, JavaScript, REST APIs, GraphQL, and WebSockets.
- Architecture & Scalability:** Strong knowledge of microservices, event-driven architecture, distributed systems, API orchestration, and asynchronous processing for high-availability applications.
- Airline Domain Expertise:** Successfully delivered key airline passenger modules including check-in, seat selection, ancillary services, and boarding-pass workflow with 95%+ automated test coverage.
- Payment Integrations:** Hands-on experience integrating Magnati and Network International payment platforms, including payment processing, webhooks, and reconciliation workflow.
- Frontend Development:** Proficient in React, Next.js, Angular, Vue.js, Material UI, and Bootstrap, delivering responsive and user-focused web applications.
- Database Management:** Experienced in PostgreSQL, MongoDB, MySQL, and Microsoft SQL Server, with a focus on performance optimization and data reliability.
- Cloud & DevOps:** Skilled in AWS, Azure DevOps, Firebase, Linux, Nginx, CI/CD, production deployments, monitoring, troubleshooting, and release management.
- Technical Leadership:** Proven track record in architecture design, code reviews, mentoring, engineering standards, and cross-functional collaboration to improve delivery quality and team performance.
- Innovation & AI:** Passionate about AI-assisted developer tooling, LLM integrations, RAG, MCP, open-source development, and developer productivity solutions.

Core Competencies

Leadership & Management - Technology Leadership - Engineering Mentorship - Cross-Functional Collaboration - Stakeholder Management	Architecture & Strategy - Enterprise Application Architecture - Scalable System Design - Microservices Strategy - Distributed Systems Engineering
Integration & Solution Delivery - API Orchestration - Enterprise Integrations - Cloud-Native Solution Delivery - Event-Driven Architecture	Operations & Governance - Production Deployment Management - Release Management - Software Quality Assurance - Payment Operations Management

Technical Skills

Programming Languages: TypeScript, JavaScript, Java, HTML5, CSS3
Backend Technologies: Node.js, NestJS, Express.js, REST APIs, GraphQL, WebSockets, Socket.IO
Frontend Technologies: React.js, Next.js, Angular, Vue.js, Vite, Material UI, Bootstrap
Databases: PostgreSQL, MongoDB, MySQL, Microsoft SQL Server
Cloud & Infrastructure: AWS (AppSync, Amplify, Lambda), Azure DevOps, Firebase, Linux, Nginx
DevOps & Version Control: CI/CD, GitHub, GitLab, Cron Jobs
Testing Tools: Jest, Playwright
Payment & Integration Technologies: Magnati, Network International, Webhooks
AI & Developer Tools: LLM Integration, Retrieval-Augmented Generation (RAG), Model Context Protocol (MCP)

Certifications

- **Problem Solving Certification** | HackerRank
- **JavaScript Certification** | HackerRank
- **SQL Certification** | HackerRank

Work Experience

techcarrot FZ LLC, Dubai, UAE | Technology Lead Analyst – Backend | Aug 2022 – Present
Overview: Leading back-end architecture, enterprise integrations, microservices development, and technical delivery for airline and digital platform initiatives.

Responsibilities:

- Architecting and developing scalable back-end systems, secure APIs, and microservices aligned with enterprise requirements and customer-facing digital journeys.
- Designing resilient back-end services with a focus on scalability, maintainability, observability, validation, error management, and production reliability.
- Building and managing integration and orchestration layers connecting front-end applications, back-end for front-end services, internal systems, external partners, and enterprise APIs.
- Implementing distributed-system interaction patterns including request validation, exception management, retry mechanisms, failure management, asynchronous processing, and API response standardization.
- Leading payment workflow implementation, including payment initiation, webhook-driven transaction updates, and financial reconciliation processes.

- Managing Linux-based production environments, including server administration, Nginx configuration, cron job management, release readiness, troubleshooting, and post-production support.
- Driving engineering quality through architecture reviews, automated testing strategies, code reviews, production-readiness assessments, and technical governance.
- Collaborating with product, business, and engineering stakeholders to align technology solutions with organizational objectives and ensure successful project delivery.

Highlights:

- Delivered airline passenger service modules including check-in, seat selection, ancillary services, and boarding-pass workflow, achieving 95%+ automated test coverage and enhancing platform reliability.
- Architected and implemented microservices-based back-end solutions, improving scalability, deployment efficiency, and long-term system maintainability.
- Integrated Magnati and Network International payment gateways, optimizing payment processing, webhook management, and reconciliation workflow.
- Improved production stability and application performance through monitoring, alerting, troubleshooting, and back-end optimization initiatives.
- Established engineering best practices through code reviews, reusable design patterns, mentoring, and technical leadership, driving software quality and team effectiveness.

MSYS TECHNOLOGIES, Bangalore, India | Lead Engineer / Full-Stack Developer | May 2021 – Aug 2022

Overview: Led full-stack application development and technical delivery for client-facing projects, combining hands-on engineering, architecture contributions, implementation planning, and cross-functional collaboration.

Responsibilities:

- Led the end-to-end delivery lifecycle for client-facing applications, covering requirements analysis, solution design, development, testing, deployment, and production handover.
- Developed scalable back-end services and APIs using Node.js, TypeScript, and database technologies, following modern engineering best practices.
- Built and maintained React and Next.js applications, focusing on reusable architecture, performance optimization, and maintainable code.
- Collaborated across polyglot technology environments, integrating Java-based systems with Node.js applications to deliver enterprise-grade solutions.
- Drove engineering excellence through coding standards, technical reviews, architectural contributions, developer mentoring, and collaboration with QA and DevOps teams.

Highlights:

- Successfully delivered multiple full-stack applications, meeting project timelines, quality standards, and business objectives while driving successful client outcomes.
- Designed and implemented a robust testing framework and code review practices that improved code quality, increased test coverage, and reduced post-release defects.
- Developed reusable front-end and back-end components and optimized application performance through refactoring, accelerating feature delivery and enhancing user experience.
- Championed Agile methodologies, knowledge-sharing initiatives, and continuous process improvements, strengthening team collaboration, delivery efficiency, and engineering excellence.

Full Potential Solutions, Chennai, India | Senior Software Engineer | Jul 2019 – May 2021

Overview: Designed and developed cloud-integrated applications, GraphQL middleware, and full-stack solutions for multiple client-facing projects, focusing on scalability, performance, and maintainability.

Responsibilities:

- Designed and developed GraphQL middleware and cloud-integrated services, enabling scalable, API-driven applications and streamlined data access layers.
- Built cloud-native solutions and integration architectures, supporting seamless communication between applications, services, and third-party platforms.
- Developed custom business features including multi-recording audio playlist workflow, reporting modules, and client-specific product enhancements.
- Created reusable UI and application components, improving maintainability, consistency, and development efficiency across projects.
- Managed multiple projects simultaneously, supporting development, testing, deployment, release management, and CI/CD-driven delivery processes.
- Resolved production issues through root-cause analysis, performance optimization, and cross-functional collaboration, improving application stability and reliability.

Highlights:

- Delivered a centralized GraphQL middleware platform, simplifying data access, reducing front-end complexity, and improving application scalability.
- Designed and implemented cloud-based service architectures and contributed to cloud migration initiatives, enhancing system performance, scalability, and integration capabilities.
- Developed reusable application components and shared modules, accelerating feature delivery and improving development efficiency across multiple projects.
- Drove application reliability through performance optimization, production issue resolution, and release coordination, earning recognition for innovative solutions and successful project delivery.

Cognizant Technology Solutions, Chennai, India | Programmer Analyst | Aug 2016 – Jul 2019

Overview: Worked as a MEAN Stack developer delivering enterprise web applications, reusable front-end modules, back-end services, and API-driven business solutions.

Responsibilities:

- Developed enterprise web applications using the MEAN stack, delivering scalable and data-driven solutions for business-critical workflow.
- Built back-end services, business logic, and API integrations, supporting efficient data processing and seamless application functionality.
- Designed and maintained reusable front-end components, services, and shared modules, improving development efficiency, consistency, and maintainability.
- Implemented productivity-focused user experiences and interaction patterns that enhanced usability for enterprise users.
- Participated in the full software development lifecycle, including requirements analysis, development, testing, debugging, deployment support, and production support.
- Collaborated with cross-functional teams while adhering to coding standards, peer review processes, and continuous improvement initiatives to enhance application quality and performance.

Highlights:

- Developed and maintained reusable Angular components, directives, and shared modules, improving development efficiency, UI consistency, and application maintainability across projects.
- Built back-end APIs, business functionalities, and data-driven features, enhancing application responsiveness, system performance, and enterprise workflow automation.
- Delivered enterprise solutions using the MEAN stack, contributing to application optimization, improved user experience, successful project delivery, and adherence to software engineering best practices.

ANNEXURE

Personal Projects

Aruvix | Independent Product Builder & React / Full-Stack Architect

Website: aruvix.com

- Built a privacy-first developer productivity platform using React, TypeScript, Vite, and Node.js, focused on local-first workflows, browser-native processing, API tooling, and structured data utilities.
- Designed and architected a modern front-end and application ecosystem with reusable patterns, emphasizing scalability, maintainability, and developer experience.
- Developed browser-native tools for API workflow, request transformation, data comparison, and structured data processing.
- Prototyped AI-assisted developer solutions, including LLM integrations, Retrieval-Augmented Generation (RAG), Model Context Protocol (MCP), and intelligent developer tooling.
- Applied modern front-end and back-end engineering patterns to create efficient, privacy-focused developer experiences.

SQL-SELECT-QUERY-GENERATOR | Open-Source NPM Package

- Created and published an open-source JavaScript NPM package for generating dynamic SQL SELECT queries from JSON-based configurations.
- Designed the solution to simplify back-end query generation, reporting workflow, and configurable data retrieval processes.
- Improved developer productivity by enabling flexible and reusable SQL query construction through structured configuration models.
- Showcased expertise in open-source development, back-end utilities, and developer-focused tooling.

@amrishkhan05/hallpass | Open-Source NPM Package

- Created and published an open-source rules-enforcement package for codifying project and engineering constraints in developer workflows.
- Designed reusable guardrails that help keep code changes aligned with defined architectural and project standards.
- Supports more consistent human and AI-assisted development by making engineering rules explicit and enforceable.

@amrishkhan05/frankly | Open-Source NPM Package

- Created and published an open-source diff-minimization utility focused on keeping code changes small, relevant, and easier to review.
- Helps reduce unrelated modifications in patches, improving code-review clarity and preserving focused implementation changes.
- Built as a developer productivity tool for cleaner collaboration, maintainable pull requests, and more predictable change sets.
